

init_sousbuffer

rect_centre_rect

rect_centre_rect_x

```
graph LR; A[init_sousbuffer] --> C[rect_centre_rect_x]; B[rect_centre_rect] --> C;
```

The diagram illustrates a data flow where two separate inputs, 'init_sousbuffer' and 'rect_centre_rect', are combined to produce a single output, 'rect_centre_rect_x'. The inputs are shown in white boxes with red borders, while the output is in a grey box with a black border. Blue arrows indicate the direction of the flow from the inputs to the output.
